Colby New Era Bond Portfolio

Robert W. Colby Asset Management
Building and Protecting Wealth

Bull Market Portfolio

Bear Market Portfolio

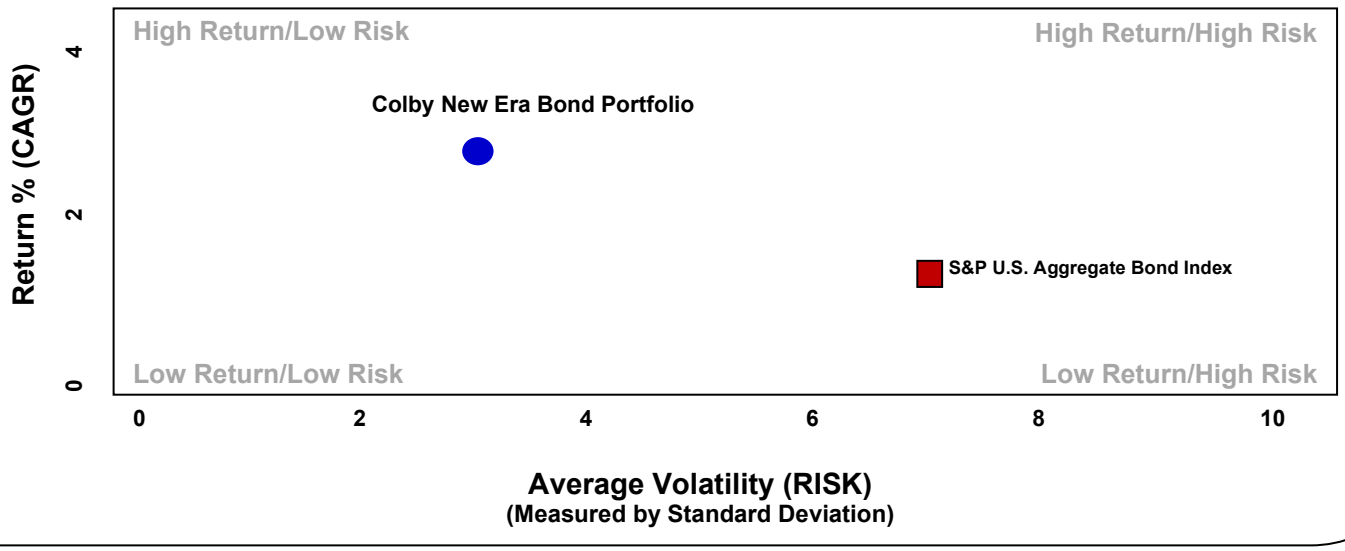

The New Era Bond Portfolio invests in pre-selected Exchange Traded Funds (ETFs). The model shown represents the target allocation for a New Era Bond Portfolio and does not represent an actual account. Target allocations to cash and other individual securities within the New Era Bond Portfolio may vary *weekly*. Individual security positions in accounts invested in the New Era Bond Portfolio will fluctuate in value and actual cash amounts can vary. This asset allocation model is provided strictly for illustrative purposes and should not be considered as actual trading or investment advice.

10-Year Risk/Reward Profile

Actual Trading June 1, 2015 – Present

Quadrants show the theoretical best and worst case scenarios for risk-adjusted returns.

BEST	
	WORST

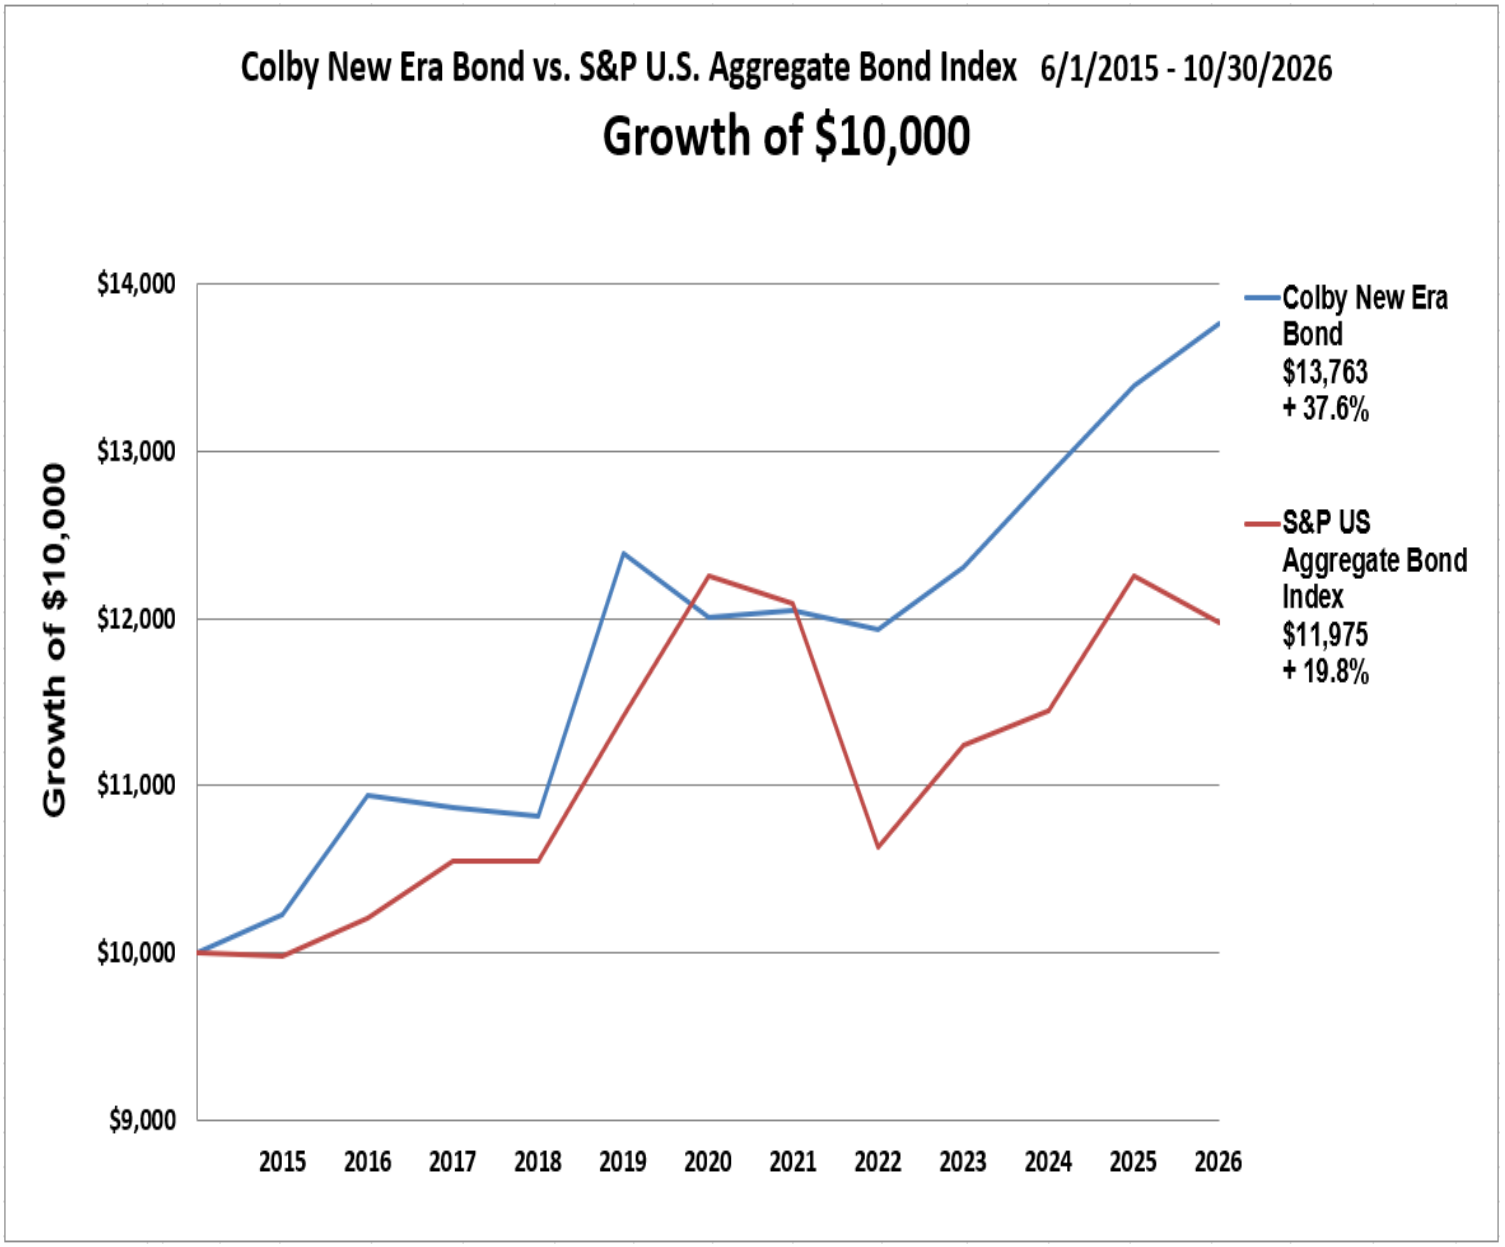

The chart above shows that the Return versus Risk relationship of the New Era Bond Portfolio target allocation, net of fees and expenses, would have compared favorably to the Return/Risk for the S&P U.S. Aggregate Bond Index over the past 10 years. It shows that the New Era Bond Portfolio would have produced significantly higher returns with lower volatility. These results reflect actual trading from June, 1, 2015 to the present, and are strictly for illustrative purposes only. Past performance does not guarantee future results. See additional disclosure regarding the 10-Year Return/Risk Profile on the following pages. Return and volatility data is shown through current month.

Colby New Era Bond Portfolio

Robert W. Colby Asset Management
Building and Protecting Wealth

The **Colby New Era Bond Portfolio** contains all discretionary accounts that are enrolled in the Colby New Era Bond trading program for the year indicated held at Interactive Brokers. For comparison purposes, the Colby New Era Bond Portfolio is measured against the S&P U.S. Aggregate Bond Index a broad-based index that is commonly used to represent investment grade bonds being traded in United States.

The goal of the Colby New Era Bond Portfolio is to seek capital preservation, capital appreciation, and income, in that order, while controlling risk, primarily by selecting various fixed-income Exchange Traded Funds (ETFs) at advantageous times, according to *Colby's* comprehensive analysis based on objective quantitative research methods and considered judgment-based *Colby's* estimates of Potential Reward compared to Potential Risk going forward.

The Colby New Era Bond Portfolio is not designed to track the general bond market, and so it is not expected to be highly correlated to the broad bond market indexes at all times. Rather, it is designed to seek positive absolute returns in any market or economic environment, including periods of expansion, contraction, inflation, deflation, etc. The aim of the Colby New Era Bond Portfolio contrasts sharply with the function of the broad-based bond market indexes, which passively track the general bond market, even when bond prices are in protracted downtrends. *Colby* seeks returns that exceed those of the bond market and also seeks to protect capital from significant risks. The Colby New Era Bond Portfolio is maximally flexible: at times, seeking the objective may require concentration in volatile high-yield bonds; and at other times it may require switching to the most conservative fixed-income instruments that offer the greatest degree of safety and protection against potential market risks, such as U.S. Government Treasury Securities and cash.

Returns presented in this report are net of actual fees and expenses. Client accounts are charged an investment management fee of 0.5% per year. Minimum Investment is $100,000.

Portfolio return is based on the change in the value of an investment in the portfolio that is expressed as an annual return over the period specified. This includes interest, dividends, capital gains and other earnings that are periodically reallocated back into the portfolio. Bond prices fluctuated significantly during the period shown, and so the results shown were obtained over a variety of market and economic conditions.

Past performance may not be indicative of future results. The performance of a specific individual account may vary substantially from the stated performance results. Therefore, no current or prospective client should assume that future performance will be equal the performance results reflected herein or will be profitable. No variation in investment strategy or tactics can guarantee positive performance or eliminate the risk of investment losses.

Disclosure Regarding Our 10-Year Risk/Reward Profile:
Information presented on our 10-Year Risk/Reward profile chart is based on actual trading from June, 1, 2015, to the present. The Risk/Reward profile shown compares the Colby New Era Bond Portfolio performance to that of the S&P U.S. Aggregate Bond Index. This Index is often used to represent investment grade bonds being traded in the United States: it is broad-based, measures the performance of the total U.S. investment-grade bond market, and includes investment-grade U.S. Treasury bonds, government-related bonds, corporate bonds, mortgage-backed pass-through securities, commercial mortgage-backed securities and asset-backed securities that are publicly offered for sale in the United States.

All market price indexes have certain limitations in that they differ from our recommended investment program in volatility, asset mix, diversification/concentration, dividends, interest, trading costs, fees, and other factors. No representation can be made that S&P U.S. Aggregate Bond Index is the most appropriate benchmark for comparison because there are very significant differences: the Colby New Era Bond Portfolio is highly flexible and dynamic while the S&P U.S. Aggregate Bond Index is passive and static, the holdings of the Colby New Era Bond Portfolio and the S&P U.S. Aggregate Bond Index differ substantially, the Colby New Era Bond Portfolio is concentrated in relatively few securities while the S&P U.S. Aggregate Bond Index is widely diversified in many different securities, and the Colby New Era Bond Portfolio and the S&P U.S. Aggregate Bond Index are subject to significantly different expenses. Unlike the S&P U.S. Aggregate Bond Index, the Colby New Era Bond Portfolio actively aims for capital preservation, capital appreciation, and income, in that order. Although *Colby* works continuously to achieve these goals, and *Colby* constantly attempts to anticipate and adapt to change, regulators maintain that there can never be any guarantees in investing; there is always risk and the possibility of loss; changing market conditions are beyond anyone's control; and past performance is not a guide to future performance.

About Our Results

All data and measures are based on return data for the Colby Fixed Income Portfolio since inception, except where specifically stated. All statements herein are intended to be accurate and complete and to disclose all material facts necessary to avoid any unwarranted inference. Any and all investment performance data shown reflect all accounts in our recommended investment program [at Folio Institutional]. (Some clients, at their own choosing, may hold securities that are not included in our recommended investment program, or they may choose to deviate from our program in some other way; therefore, their performance results may deviate from our recommended investment program, for better or worse, and are not included in our performance data.) Our performance data reflects the deduction of advisory fees, brokerage and other commissions and fees, and any other expenses that accounts have actually paid. Our performance data reflects the reinvestment of dividends, interest, and other earnings. Our investment strategies and all fees are explained on our website and in our disclosure documents and also are available on request. The industry standard benchmark for performance comparison is generally the S&P U.S. Aggregate Bond Index, although that and all other price indexes have certain limitations in that they differ from our recommended investment program in volatility, asset mix, diversification/concentration, dividends, interest, trading costs, fees, and other factors. Unlike the S&P U.S. Aggregate Bond Index, which passively reflects a broad-based index that is commonly used to represent investment grade bonds being traded in United States, our recommended investment program is concentrated in relatively few securities and actively aims first for capital preservation and second for capital appreciation. We work continuously to achieve these goals. We try to anticipate and adapt to change. Regulators point out that there can never be any guarantees in investing; there is always risk and the possibility of loss; changing market conditions are beyond anyone's control; and past performance is not a guide to future performance.
